 Mei Kobayashi , Koichi Takeda
ACM Computing Surveys (CSUR) June 2000
 Volume 32 Issue 2
 In this paper we review studies of the growth of the Internet and technologies that are useful for information search and retrieval on the Web. We present data on the Internet from several different sources, e.g., current as well as projected number of users, hosts, and Web sites. Although numerical figures vary, overall trends cited by the sources are consistent and point to exponential growth in the past and in the coming decade. Hence it is not surprising that about 85% of Internet user ...

 Andreas Paepcke , Hector Garcia-Molina , Gerard Rodriguez-Mula , Junghoo Cho
ACM SIGMOD Record March 2000
 Volume 29 Issue 1
 In the face of small, one or two word queries, high volumes of diverse documents on the Web are overwhelming search and ranking technologies that are based on document similarity measures. The increase of multimedia data within documents sharply exacerbates the shortcomings of these approaches. Recently, research prototypes and commercial experiments have added techniques that augment similarity-based search and ranking. These techniques rely on judgments about the 'value' of documents. Jud ...
